WRAPPED UP FOR WINTER

Winter down south is an intense season. Jennian Homes Mid-Canterbury Ltd recently undertook a project at Lake Tekapo where the temperature got down to minus seven. The location proved a challenge when large shifts in weather patterns, sometimes during a single day, veered from frost to severe wind and rain, to intensive periods of heat. The large single story dwelling needed to be protected from the elements and remain weather tight during construction.

Director Nigel Smith said the use of the Ecoply® Barrier rigid air barrier system enabled them to enclose the building envelope quickly and efficiently. "This gave us the opportunity to progress at a reasonable pace. Due to the required Council inspections for the building consent, the house had to be weather tight prior to commencing work on the interior. Ecoply Barrier gave us the necessary tick-off to continue much earlier than we would have been able to had we used conventional building wrap." Suitable for use in all wind zones as defined by NZS 3604 Ecoply Barrier is a performance rated structural plywood providing durability, strength and design flexibility. All this, and the Barrier system can significantly improve project construction speeds as delays waiting for exterior cladding installation to be completed before starting interior fit out work can be avoided.

Home owners want reassurance that their home is their sanctuary, a place of warmth and privacy. With Ecoply® Barrier it's an achievable goal.

"Our trial results showed that we picked up time on our projected plan and the building was far more secure in the environment we were building," says Nigel. "And the Ecoply Barrier system certainly gives a look and feel of substance when building a new home."

He adds that he can see the advantages of offering the product as part of their standard specifications. "We were very happy using the Ecoply Barrier system. We can see the benefits, our trades see the benefits, and it is really just a matter of conveying this to our clients."

There's no doubt it is a very tough market at present. To ensure a new home build is one that gets talked about for all the right reasons it must deliver on all fronts – be on time, be on budget and use quality materials that provide safety and security. Home owners want reassurance that their home is their sanctuary, a place of warmth and privacy. With Ecoply Barrier it's an achievable goal.
